ABOUT ME

I'm a **Full-Stack Developer** with strong **MERN stack** expertise (React, Node.js, Express, MongoDB) and **WordPress** customization. I combine traditional development skills with **AI-assisted workflows** to accelerate problem-solving and deliver efficient, high-quality code. Recently, I've expanded into Next.js, NestJS, PostgreSQL, and Flutter **backend integration**, delivering production-ready web and mobile solutions. I specialise in building responsive, user-friendly applications and resolving complex **bugs** to create reliable, scalable platforms that help businesses grow.

WORK EXPERIENCE

MOBILE APP – BACKEND INTEGRATION – VIVIDHOOD – 18/07/2026 – 25/07/2026

Technologies: Flutter, Dart, BLoC (Cubit), NestJS, PostgreSQL, JWT, Google Sign-In, Biometric Authentication, Cloudinary, REST APIs

- Integrated **30+ backend API endpoints** from a live NestJS/PostgreSQL backend into a full-featured Flutter mobile application.
- Implemented complete **customer journey**: phone/OTP signup, Google Sign-In, biometric fingerprint login, service discovery with dynamic filters, real-time booking with availability slots, appointment management, favorites, referrals, loyalty/viPoints wallet, and notification system with unread badge.
- Built out **provider dashboard & management tools**: real-time metrics, calendar with manual booking creation, services management with Cloudinary image uploads, staff management, and full settings suite (profile, categories, notifications, security).
- Architected clean **feature-based folder structure** with **repository pattern** and **BLoC/Cubit state management**, ensuring separation of concerns and scalability.
- Delivered a **fully server-dependent app** with no local database — all data synced in real time with the web platform.
- Applied advanced Flutter concepts: secure credential storage (flutter_secure_storage), multipart image uploads with Cloudinary, OTP verification flows, Google OAuth integration, and dynamic category/district filtering driven by backend data.

Website: <https://vividhood.com>

Mobile App: Coming soon to the Google Play Store (currently in development).

FULL-STACK BUG FIXING – VIVIDHOOD – 23/06/2026 – 04/07/2026

Technologies: Next.js, React, TypeScript, NestJS, PostgreSQL, JWT, Google OAuth

Diagnosed and resolved **12+ critical bugs** across the Next.js frontend, NestJS backend, and PostgreSQL database.

- **Global Routing & i18n Fixes** – Engineered a Next.js Middleware rewrite strategy to resolve 404 errors on localised English URLs, ensuring all Google-indexed links functioned correctly.
- **Email Language Synchronization** – Passed the lang parameter from frontend to backend so Chinese users received Chinese verification/welcome emails.
- **Marketplace Fairness** – Re-architected database queries to use PostgreSQL RANDOM() sorting, giving all providers equal visibility.
- **React Hydration Resolution** – Bypassed lazy translations and used URL-path detection to eliminate red-screen hydration errors on page refresh.
- **API Audit & CORS Fixes** – Removed hardcoded local/production URLs and enforced environment-based API configuration, fixing intermittent fetch failures.
- **Admin Financial Integrity** – Implemented conditional rendering to hide Stripe fees for manual/walk-in appointments.
- **Verification Pending UI** – Transformed a static email field into a dynamic input, allowing users to correct typos and resend verification emails.
- **Service Visibility Toggle** – Added a provider “Eye” icon to hide/show services, with instant UI updates and backend status preservation (no re-approval needed).
- **Dynamic Email Change** – Built a frontend-backend flow that allowed users to update their email during verification and receive a fresh token.
- **Case-Insensitive Login** – Implemented .trim().toLowerCase() across all authentication forms (frontend) and backend storage/lookup, eliminating uppercase login failures.
- **Google Auth Persistence** – Strengthened provider Google sign-up flow by adding a profile-completion guard and modal, preventing incomplete accounts.

FULL STACK DEVELOPER – EYECON (CLINIC MANAGEMENT SYSTEM)

Technologies: MongoDB, Express.js, React.js, Node.js, JWT, Context API

- Architected and deployed a complete MERN-stack healthcare application featuring a dynamic patient-facing portal and a secure admin dashboard.
- Developed a frictionless, multi-step appointment booking wizard with dynamic doctor-to-service filtering and real-time scheduling logic.
- Built a custom Content Management System (CMS) allowing clinic admins to perform full CRUD operations on doctors, services, blogs, and global site settings.
- Optimized backend performance by implementing a centralized / bootstrap endpoint using Promise.all() to load initial frontend state in a single network request.
- Secured admin routes using JWT authentication and Bcrypt password hashing.
- Engineered automated database maintenance using MongoDB TTL indexes to automatically drop expired appointment documents 24 hours post-visit.

Website : <https://eye-clinic-three.vercel.app>

FULL STACK DEVELOPER – UNIVERSITY OF GUJRAT (ACADEMIC PROJECT)

Technologies: React.js, Node.js, Express.js, MongoDB, CNN Model

- Developed a full-stack MERN eCommerce application with user authentication and secure checkout.
- Implemented a product catalog, shopping cart, and booking system for gardening services.
- Integrated an AI chatbot assistant to support customer queries.
- Built a CNN-based plant recognition module to identify plant species.
- Developed an admin panel for managing products, users, orders, and service bookings.

GitHub: <https://github.com/21014156-068>

WORDPRESS DEVELOPER – PASWAL TOURS LTD

Technologies: WordPress, PHP, Elementor, HTML, CSS, JavaScript, WhatsApp Integration

- Developed a multi-service platform providing visa services, flight booking, and Pakistan Nadra services (ID card/passport creation and renewal) for the client.
- Implemented WhatsApp-based booking and communication system for instant user engagement.
- Designed a fully responsive, user-friendly interface with focus on trust, clarity, and professional presentation.
- Integrated informative sections and interactive components to enhance user confidence and engagement.
- Prepared backend structure to accommodate future real-time API integrations for flight and service data.

Website : <https://mysafetrips.com/>

WORDPRESS / WOOCOMMERCE DEVELOPER – LOCAL BUSINESS CLIENT

Technologies: WordPress, WooCommerce, Payment Integration

- Developed and customized an eCommerce store using WooCommerce.
- Configured product pages, payment gateway, and checkout workflow.
- Optimized store layout and navigation for better user experience.
- Implemented responsive design to ensure accessibility on mobile and desktop device.

Website : <https://alfattahvibes.com/>

PERSONAL PORTFOLIO WEBSITE – SELF-EMPLOYED

Technologies: React.js, JavaScript (ES6+), HTML5, Tailwind CSS, Responsive Design

- Designed and developed a professional portfolio website to showcase development projects and technical skills.
- Implemented responsive UI components and interactive project showcase sections.
- Provided access to GitHub repositories and live project demonstrations.

Portfolio: <https://abdullahjs.dev/>

TECHNICAL SKILLS

Programming Skills

- **Languages:** JavaScript (ES6+), TypeScript, Dart
- **Frontend:** React.js, Next.js, HTML5, CSS3
- **Backend:** Node.js, Express.js, NestJS
- **Mobile:** Flutter (backend integration – BLoC/Cubit, repository pattern)
- **Databases:** MongoDB, PostgreSQL

- **API:** REST API design & integration, JWT authentication, OAuth (Google)
- **Other:** WordPress, WooCommerce

Tools & Platforms

- Git & GitHub
- Cloudinary (image upload & management)
- AI-assisted development tools (code generation, debugging, refactoring)
- Postman (API testing)
- VS Code, Android Studio

EDUCATION AND TRAINING

27/11/2021 – 24/05/2025 Gujrat, Pakistan
BS INFORMATION TECHNOLOGY University of Gujrat

Website <https://uog.edu.pk> | Final grade 2.78 / 4.0

2019 – 2021 Gujranwala, Pakistan
INTERMEDIATE (ICS) Govt. Degree College, Qila Didar Singh

Final grade B

2017 – 2019 Gujranwala, Pakistan
MATRICULATION (SCIENCE) Heaven Public School, Qila Didar Singh

Final grade A

LANGUAGE SKILLS

Mother tongue(s): **URDU** | **PUNJABI**

Other language(s):

	UNDERSTANDING		SPEAKING		WRITING
	Listening	Reading	Spoken production	Spoken interaction	
ENGLISH	C1	B2	B2	C1	C1
HINDI	C2		C2	C2	

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

INTERESTS

Software Development

- Full Stack Web Development
- Scalable Web Applications

Artificial Intelligence

- AI-assisted systems
- Practical AI applications in web platforms
